*A person with depression is usually perceived
as being sad, withdrawn and hopeless.*

*You may be surprised to know that the words
on the cover describe valid symptoms of depression...
at different ages and stages of life.*

These depression experts will inform you when these symptoms occur and how they require different treatment in childhood, adolescence, adulthood and late life. This information is valuable for family, friends, associates and perhaps yourself. It may not only improve a life, but save one.

HOPE FOR DEPRESSION
RESEARCH FOUNDATION

The mission of the Hope for Depression Research Foundation (HDRF) is to fund innovative, international depression research, utilizing affective neuroscience, into the origins, diagnosis, treatment and prevention of depression and its related mood and other emotional disorders – bipolar disorder, dysthymia, post-partum depression, post-traumatic stress syndrome, anxiety disorder and suicide – with the ultimate goal of finding a cure.

Every dollar raised goes directly to research!
